

1. Explain how the concept of overlay networks relates to both IPv6 and multicasting. (4 sentences or less, on back)
2. Show the steps it will take the distance vector algorithm to converge for this network. Include poisoned reverse. Note that the three nodes are distributed across the table and time goes down, unlike your book.:

		Cost To					Cost To					Cost To			
		D ^A					D ^B					D ^C			
		A	B	C			A	B	C			A	B	C	
From	A				From	A				From	A				
	B					B					B				
	C					C					C				
From	A				From	A				From	A				
	B					B					B				
	C					C					C				
From	A				From	A				From	A				
	B					B					B				
	C					C					C
